

4 Year Study

Telematics Results

Learn more at EnvueTelematics.com

By the end of 2012, this company's fleet had fully implemented EnVue's Telematics Program in all of their vehicles. As such, 2012 is used as the benchmark year.

During the pilot and deployment periods, we worked with them to:

- Measure idle time, fuel, mileage and driver behavior
- Develop new and sustainable policies to hold drivers accountable
- Create and distribute reports to field level management to support the Telematics deployment
- Train supervisors to interpret their fleet data and provide the necessary coaching to ensure compliance

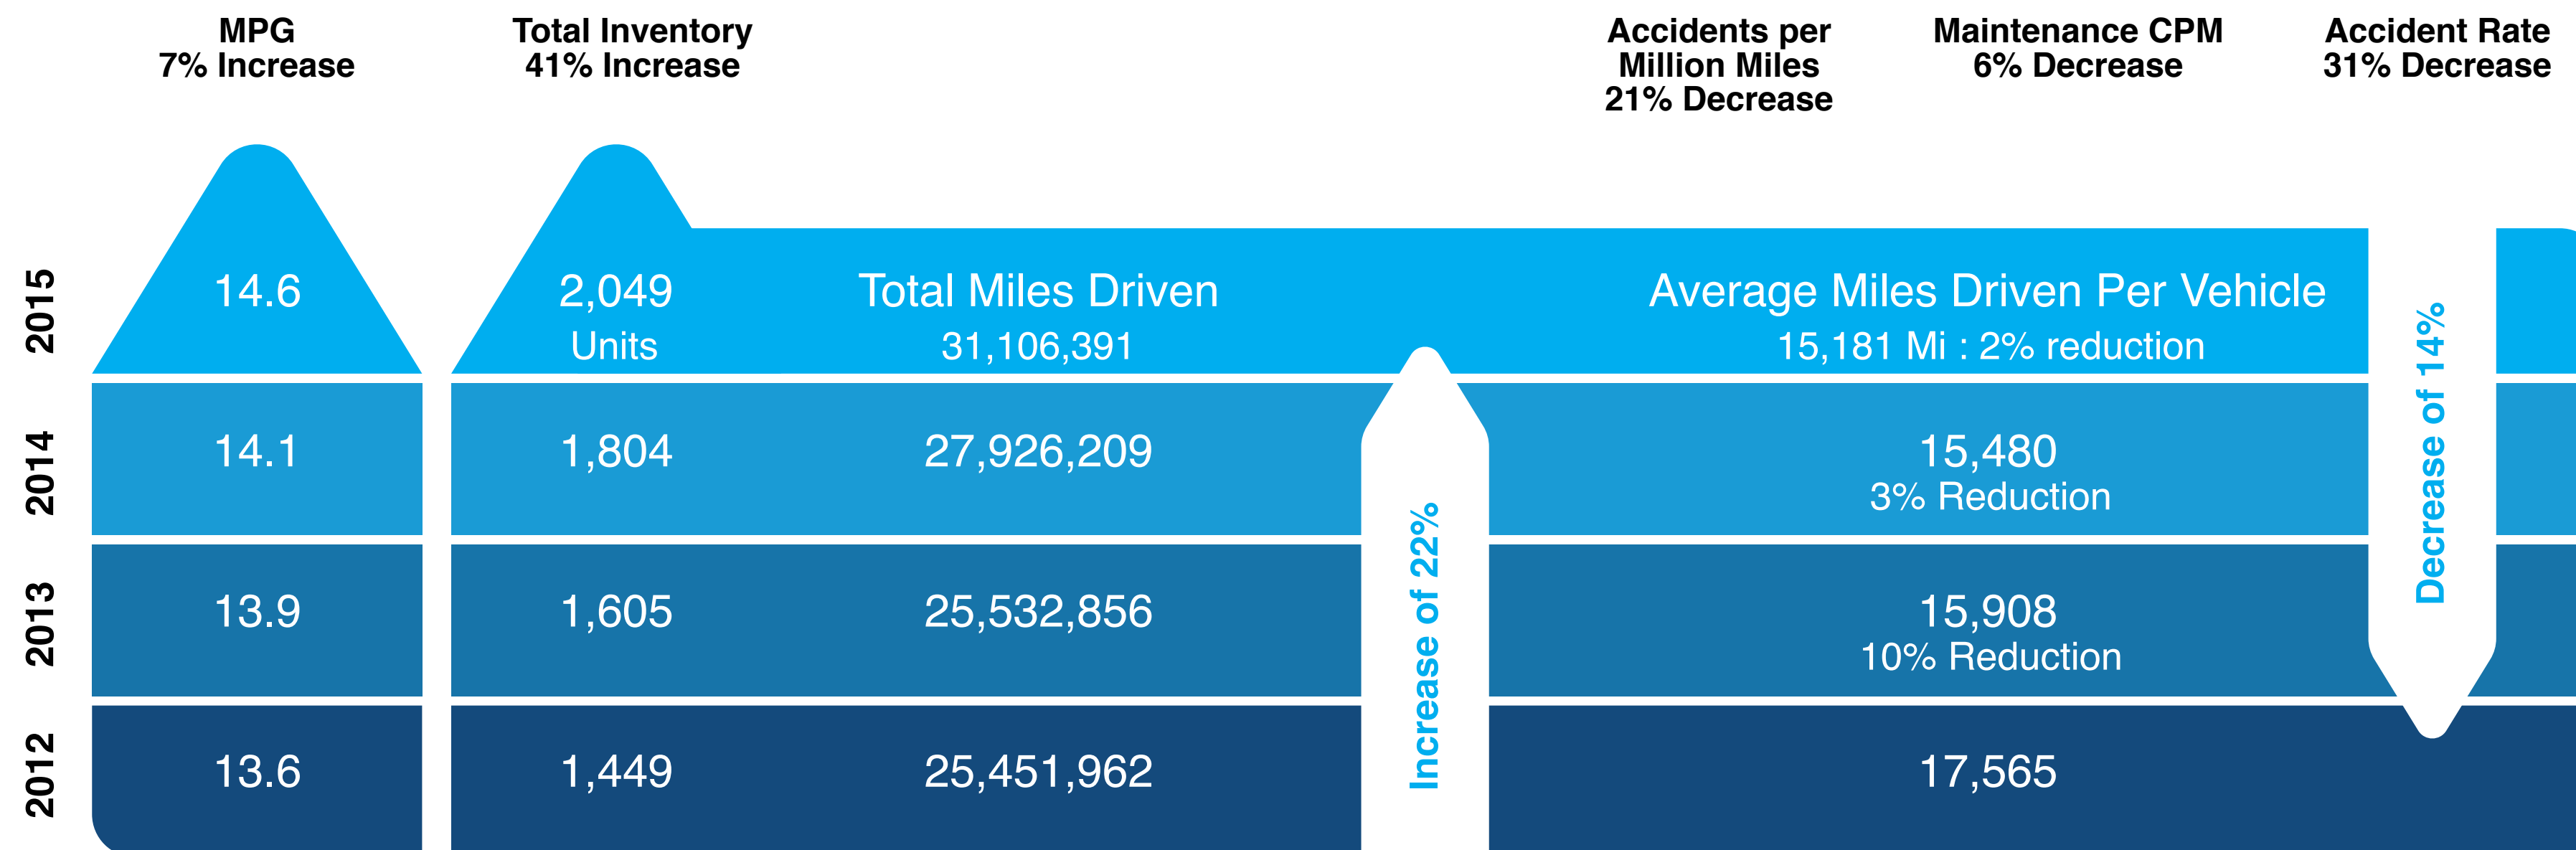

Working together, we established a new cultural normal with telematics at the forefront and provided them with the desired results through strong effort, diligence and teamwork.

Accidents per Million Miles
21% Decrease

Maintenance CPM
6% Decrease

Accident Rate
31% Decrease
