

82%

of financial professionals report that their organization experienced attempted and/or actual payments fraud in 2018<sup>1</sup>

Fuel fraud and fuel card misuse present a risk for a fleet of any size

Even with industry leading protections, some fraud has gone undetected — until now

## FLEETCOR's Enhanced Authorization Controls

Two powerful fleet management tools working together to fight fraud and misuse

### FLEETCOR Fuel Cards

Enhance security by requiring Driver ID/PIN validation and supporting spending limits like merchant type, day of the week, and time

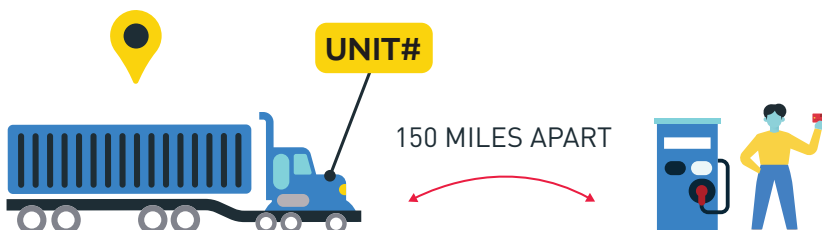

### Geotab GPS Solution

Improve the efficiency of a fleet by tracking a vehicle's location, monitoring fuel tank capacity, and routing drivers

By combining your FLEETCOR fuel card program with data from Geotab GPS solution, it's easier than ever to root out fraud at its source<sup>2</sup>

Here we determine that the truck is not at the pump when there is an attempt to use the card

Here we stop an attempt to pump more fuel than the vehicle's tank can hold

<sup>1</sup>2019 AFP® Payments Fraud and Control Survey Report –Key Highlights, Association for Financial Professionals and Underwritten by J.P. Morgan, January 2019.

<sup>2</sup>The integration of a fuel card with a telematics solution cannot predict or prevent all fraudulent transactions. Enhanced Authorization Controls only work when integrated with a partner's telematics solution and when necessary data is available. These controls are only available when a qualified FLEETCOR fuel card is selected. Proximity features, including alerts and authorizations, are available only on FLEETCOR fuel cards carrying the COMDATA® or Mastercard® brand.

# You know better than anyone what types of protections your business needs

**FLEETCOR's Enhanced Authorization Controls put you in charge of those protections<sup>2</sup>:**

Levels of protection:	Monitor fuel use	Detect potential fuel fraud	Real-time fuel fraud protection
Fueling data in GPS reports	✓	✓	✓
Fueling alerts		✓	✓
Automatic authorizations & declines			✓

### Monitor fuel use

Manage fuel expense by combining a vehicle's GPS location information with fuel purchase data in GPS fuel management reports

### Detect potential fuel fraud

Get alerts when the vehicle and fuel purchase location do not match or the level of the vehicle's tank at the time of card swipe is above a fuel level you have defined

### Real-time fuel fraud protection

Authorize only enough gallons or \$'s to fill the tank's available capacity. Decline the transaction when a vehicle and the purchase location are not in proximity to each other or when the level of the vehicle's tank at the card swipe is above the level you have defined
