

TRUCE® Software

TRUCE is the leading provider of Contextual Mobility Management solutions that enable companies and their employees to get the best that mobility has to offer. TRUCE optimizes mobile safety and productivity across the workplace. We proudly protect over 140,000 subscribers and over 440 companies large and small.

Manage Mobile Device Usage When, Where, and However It's Needed

Mobile technology is changing the nature of how teams work, allowing once time-consuming work processes to be digitized and streamlined. For many, embracing mobility means facing a trade-off between maximizing the value it brings to the workplace and managing its use in the name of safety, productivity and security. TRUCE eliminates the need to make a choice.

TRUCE intelligently identifies work environments based on contextual indicators such as movement, vibration, location, proximity or schedule. Once the context is identified, access to mobile apps and functionality is automatically enabled or suspended based on your policies for as long as an employee is in that work environment.

To put it simply, with TRUCE, what's happening around a device determines what's accessible on a device. Instantly and automatically.

Take the Guesswork out of Enforcing Your Policies

Automatic Protection

Mobile phones or tablets are switched to a protected state as soon as the TRUCE app detects a high-risk situation.

Any Device. Anywhere.

Enforce your policies even when WiFi is down or cellular coverage is lacking.

The Right Apps at the Right Time

You decide which job-specific apps to all employees to access depending on the situation.

The Power of TRUCE

Bring your mobile policies to life while protecting your employees, your workplace and the communities you serve.

Non-Managed

Normal use all functions/
apps TRUCE knows when use
is not in a protected zone

Protected

Policy enforced access to
only allowed functions/
apps in a protected zone

Key Features

- Enables access to only approved apps or functions when active
- Adapts device permissions in real-time based on the user's situation and company policy
- Returns to normal phone operation when not in a managed or protected zone
- Maintains a native-like user experience when in managed zones
- Can integrate with your corporate MDM
- Easily deployed on any device, iOS and Android operating systems

TRUCE Management Console

- Enables configuration of mobile device usage policies specific to your business across all work environments
- Configurable based on company hierarchy (divisions, regions, groups, job type, individuals)
- Enforcement visibility and monitoring for all applications and functions (e.g. alerts, calls, texts)
- Makes it easy to modify policies, understand employee behavior, and get a fuller picture of what happens across the workplace
